

Nguyen Le Hoang (Leo)

Melbourne, VIC | hnguyen.leo04@gmail.com | linkedin.com/in/leo-hnguyen | leohngdev.github.io

SUMMARY

IT graduate (Software Development major, Games Development minor) with hands-on experience in full stack web development, agile delivery with real clients, and game environment and audio design. Comfortable across the stack, from debugging legacy backends to shipping production features.

EDUCATION

Monash University — Bachelor of Information Technology

Feb 2023 - Dec 2025

Major: Software Development | Minor: Games Development

Coursework: Object-Oriented Programming, Database Systems, Web Development, Game Design, 3D Animation

- Games minor coursework in Unity and Unreal Engine, covering gameplay systems, AI behaviour and AR/VR interaction.
- Built a Unity farm environment with Timeline cinematics and a full FMOD soundscape, alongside 3D modelling and animation coursework in Maya.
- Web and database coursework across HTML, CSS, JavaScript, Node.js and PHP, with relational schema design and query tuning in PostgreSQL and MySQL.

EXPERIENCE

Independent Projects — Self-directed

Apr 2026 – present

Melbourne, Australia

- Building Yard, a privacy-first social app: Next.js and React on the web, an Expo React Native client, and Supabase Postgres with eleven hand-written migrations enforcing access through row level security.
- Implemented embedding-based match signals with pgvector and a deterministic offline fallback, recomputed on scheduled cron jobs.
- Built PostMint, an asynchronous content pipeline turning market data into generated finance videos via a Redis-backed BullMQ queue and programmatic rendering in Remotion.

Software Developer — ANTSA (Industry Experience Project)

Jul – Nov 2025

Monash University · Melbourne, Australia

- Worked in an agile team of five on the questionnaire assessment features of a live Australian digital mental health platform (Next.js / PostgreSQL / React Native).
- Moved assessment configuration out of application code and into data, so clinical instruments can be adjusted without a developer release.
- Extended the new configuration through to the clinician dashboard and the PDF export report.
- Rebuilt the local multiservice development environment so the system ran end to end, and tracked down a defect that produced no error and no log output.
- Delivered a 100% UAT pass rate across two client signed iterations.

Hackathon Participant — Monash University

Feb – Mar 2023

Melbourne, Australia

- Prototyped software and game concepts under 24–48 hour constraints using Agile.
- Delivered functional demonstrations under tight deadlines.

Robotics Team Member — FRC Team

Aug 2020 – Mar 2022

Ho Chi Minh City, Vietnam

- Programmed robot navigation and sensor systems in Python and C++.

Collaborated on autonomous component design and presented technical updates to mentors.

TECHNOLOGIES

Languages: Python, Java, C++, C#, JavaScript, TypeScript, HTML, CSS, PHP, SQL

Web & Backend: Node.js, Nest.js, React, React Native, CakePHP, PostgreSQL, MySQL, REST APIs

Game & 3D: Unreal Engine, Unity, Maya, Substance Painter, AR/VR, Character Rigging & Animation

Ways of Working: Git & GitHub, Agile / Scrum, UAT, Code Review, CI/CD, Debugging legacy systems
